

Capstone Project – The Battle of Neighbourhoods (Part One)

Introduction

The city of New York has a large and ethnically diverse kind of people. Even being the largest city also comes with a long history of international immigration, as well New York had roughly 8.5 million people in 2014; it means 40% of New York's population near 24 million people. Hence over the last decade, the city grew faster than another region. Indeed the area stays so far on a leading metropolitan gateway where legal immigrants came to live in the United States.

However, New York City is considered the main point of living for immigrants with the term melting pot used to describe the most populated immigrant neighbourhoods on the Lower East Side. More than 800 languages are spoken, making it the most linguistically diverse where of them 25% speak another language or maybe have limited fluency in the English language. Also, English is the least spoken in neighborhoods like Corona or maybe Sunset Park. With a bunch of diverse cultures, it comes with many kinds of foods. So far, it has many restaurants with Chinese, Brazilian, French, and Japanese cuisine, which is very interesting as a subject for data analysis.

Problem

Now let's enumerate the problems:

- 1) Figure out and visualize all great places in New York with awesome Indian restaurants
- 2) Where we can find the best place for Indian foods?
- 3) Which areas has potential Indian restaurant Market?
- 4) Which areas doesn't has Indian Restaurants?
- 5) Which is the best place to stay whether you want Indian cuisine?
